### COMMONWEALTH BUREAU OF CENSUS AND STATISTICS OF MANPOWER AND EMPLOYMENT STATISTICS. (Including Numbers in Armed Forces)

#### SEPTEMBER, 1943.

NOTE: (1) As this memorandum contains secret data as to Defence Forces and total manpower position, its circulation is limited to a small list of officers who have occasion to use it. Numbers in Defence Forces must not be published in any way and the document must be carefully safeguarded.

(2) The statistics herein are as at the end of September, 1943. Future issues will appear about eight weeks after the end of the month to which they relate.

#### Summary of Contents

- 1. Employment and Enlistments.
- 2. Employment (excluding Rural & Household Domestic)
  3. Summary of Manpower Statistics Australia.
- 4. Summary of Lanpower Statistics Austral
  5. Defence Forces.

1. Employment and Enlistments: The following table shows, as at the end of July, 1939, July, 1941, November, 1941, and each month from September, 1942, to September, 1943, the estimated number of persons employed as wage and salary earners in industry (excluding rural and household domestic) and the net enlistments in the Defence Forces since the commencement of the war. "Net Enlistments" represents the net number of persons taken into Defence Forces and not subsequently discharged into civil life.

#### AUSTRALIA - Wage Earners Employed in Industry and Total Net Enlistments in Defence Forces.

(a) Includes employees of Allied Works Council and Allied Governments, in addition to all other workers engaged in production of war materials and services. A.W.C. employees first appeared in May, 1942, and numbered approximately 48,000 in September, 1943. (b) See Section 5 of this Survey for fuller details of these figures. They represent "Gross Enlistments" less discharges and include dead, missing, prisoners of war and wounded. Figures as to enlistments, discharges, etc., in respect of Army are in process of revision and the figures herein will be amended when check is complete.

The main features of the September figures may be summarized as follows:
Males: The total number of males employed in industry (excluding rural) or enlisted in the Defence Forces increased steadily from November, 1941, to June, 1942, at an average rate of 23,800 per month, but thereafter increased by only 19,200 in fifteen months. During the past few months there has been little change in the total males engaged, so that few men, if any, are now being obtained from other sources, namely, rural workers, unemployed, independents and men usually occupied as employers or self-employers. Compared with the previous month, the intake into the Forces in September was only 600. but males employed in non-rural industry showed a decrease of 3,900.

Females: Total females employed in industry (excluding rural and household domestic) and in the Defence Forces increased by 900 in September. The monthly increase during the twelve months ended September, 1943, averaged 5,100. The number of females taken into the Forces in September was 800 compared with an average monthly increase of 1,900 during the twelve months ended September, and the increase in civil employment was 100 in the month compared with an average of 3,100 during the preceding twelve months.

2. Employment (excluding Rural and Household Domestic): The numbers of persons employed in July, 1941, November, 1941, and each month September, 1942, to September, 1943, (as shown in the first three columns of the previous page) are dissected in the following table into four main groups of employment.

(a) Allied Works Council employees are included with "Other Governmental" or "All Other" according to whether they were working for Governmental authorities or private contractors. The increase in "Other Governmental" after November, 1941, is due to the inclusion of these men, but the subsequent decline of the "Other Governmental" figures for males shows that the necessarily large increase of public employment for war purposes has been offset by curtailment of the numbers of males in less essential governmental activities. Employees of Allied Governments are also included with "Other Governmental".

The figures at the foot of the table show absolute amounts (in thousands), and percentages of increase in employment since the end of November, 1941, indicating the trend of employment in various groups since war was commenced in the Pacific. Munitions, aircraft and shipbuilding showed a steady growth in the total for both sexes until April, 1943. Male employment in munition factories increased rapidly until July, 1942, but after that date, the monthly increase slackened off, and since April, 1943, about 4,100 men have been released. Female munition workers continued to expand until May, 1943, but 2,700 women have been released since that date. Male workers in other factories and workshops were increasing when war with Japan started, but, with the exception of seasonal increases during recent months, have declined slowly from the November, 1941, peak. The loss of 32,100 workers since November, 1941, representing 7 per cent. of their number at that date, is slightly in excess of the number of male factory workers absorbed by the munition works. (Of course a very large proportion of the factory workers remaining have been transferred to war contracts.) Female workers in other factories and workshops have remained very steady since November, 1941, and are only 4,600 above the November, 1941, level. Governmental services other than munition works increased slightly until April, 1942, but the large increase in May, 1942, was due to the inclusion of such Allied Works Council employees as were working directly for Governmental authorities. Since May, 1942, males in this group have decreased by 12,400. The number of females in Government services has increased fairly steadily, and in September, 1943, stood at 57 per cent above the November 1941 level. Males in "all other industries" reached a peak in September 1941, and the decline in subsequent months placed September, 1943, at 23 per cent below November, 1941. This fall has meant the releasing of 125,000 men for the Armed Forces. Females in "all other industries" showed a slight tendency to increase Armed Forces. Females in "all other industries showed a structured fairly steady after that date.

Summing up, it may be said that from November, 1941, to May, 1943, munition etc. works required 32,200 extra men and 28,600 extra women, but have subsequently released 4,000men and 2,700 women. Other Government activities have required 7,600 extra men and 38,000 women, while other factories and workshops released 32,100 men, and all other industries released 124,700 men. Female employment in industries other than munition etc., works and other government activities, was very little changed.

3. Summary of Manpower Statistics - Australia: The following table shows for September, 1943, the number of males and females enlisted in the Defence Forces, those engaged as wage or salary earners in civil occupations other than rural and household domestic pursuits, and unemployed wage and salary earners. Comparison of the changes in each of these groups from pre-war conditions (July, 1939) and from November, 1941, is also made. The three centre columns show figures for the complete period since the commencement of war, while the three right-hand columns show that part of the change which has occurred since the entry of Japan into the war.

Notes to above table:

- (a) Defence Forces include enlistments ince the commencement of war only. Fuller details are given in Section 5 of this summary. The relatively small number of permanent forces are included in "other" wage and salary earners employed Item (ii) of above table. See footnote (b) to table on page 1.
- (b) Unemployed wage and salary earners include all those not in employment on account of sickness, accident, unfitness and lack of work. Sickness and accidents are responsible for over 40,000 of the total unemployed shown above. The figures are approximate estimates only, as no exact records are available.
- (c) Normal increase in wage and salary earners is the estimated increase in the number of available wage and salary earners which would have been expected had the trends of recent pre-war years been continued.
- (d) "Not gainfully occupied" groups include independents, retired persons, women previously not gainfully occupied, children who commence wage-earning earlier than they would in normal times, and persons who delay their retirement from wage-earning occupation.

It will be seen that since July, 1939, 733,200 persons have been absorbed by the Defence Forces while 159,600 have been absorbed into industries other than rural and private domestic service. This total of 892,800 has been drawn from (a) unemployed wage and salary earners, the decrease of whom has contributed 253,300 persons; (b) normal increase of wage and salary earners amounting to 114,300 persons, and (c) persons not gainfully occupied, (including retired persons who have become wage earners and wage earners who have delayed retirement), employers and self-employed persons who have become salary and wage earners, and rural and private domestic wage earners who have entered the Forces or transferred to other industry. This latter group has contributed 525,200 persons.

Men engaged in the Forces and Industry have increased by 654,500 and women by 238,300 since the outbreak of war. The males were obtained from the following sources:-unemployed, 235,300; normal population increase 74,200; and drawn from rural industry, self-employed, and "independent" persons, 345,000. Of this latter group it is estimated that approximately 83,000 came from rural wage earners, 58,000 from other rural workers, 120,000 from employers, workers on own account, and helpers, and 85,000 from males who would not otherwise have been gainfully occupied. All the increase went into the Forces with the addition of 30,800 released by industry. The females came principally from unoccupied women and women in private domestic service (and a few self-employed), 180,200 while normal increase yielded 40,100 and unemployed 18,000.

The next table summarizes the salient features of the foregoing analysis for males and females separately in three periods:- (a) July, 1939, to November, 1941 - the period of war prior to the entry of Japan; (b) November, 1941, to November, 1942 - the first twelve months of the Pacific War and (c) the first ten months of the second year of war in the pacific.

(a) See explanation of net enlistments in Section 5 on page 5 hereof. See also footnote (b) to table on page 1. (b) As defined in (v) in previous table.

During the first period of the war, males engaged in the Forces and Industry were increasing at an average rate of 16,700 per month; the monthly increase fell to 14,500 in the first year, and to 1,100 in the first ten months of the second year of the Pacific War. Entries into the Forces, however, averaged 13,500 monthly for the first period, rose to 22,800 in the first year of Pacific War, but averaged only 3,300 in the subsequent ten months. Diminishing unemployment was yielding 6,800 monthly in the early part of the war, fell to 3,600 per month during the first year of the Pacific War, but is now negligible. Men drawn into the Forces and Industry from other groups at first averaged 8,300 monthly, rose to 9,700 in the twelve months after Japan entered the War, but ceased in September, 1943. In recent months, the decline in males employed in recorded industries and normal increase of available males has more than offset the increase in net enlistments. Men made available in this way have presumably gone into rural industry.

Women commenced to be recruited for the Forces about the middle of 1941. They averaged only 800 per month from July to November, 1941, but in the next twelve months averaged 2,200 per month, and in the ten months December, 1942, to September, 1943, averaged 1,800. Those entering industry averaged about 4,000 each month prior to November, 1941, during the next twelve months they averaged 3,900 and in the ten months December, 1942, to September, 1943, averaged 2,600. The largest sources of additional female labour were unoccupied women, women engaged in private domestic service, and employers and self-employed women. These sources provided 3,100 per month in the early part of the war, 5,000 per month in the twelve months after November, 1941, and 3,500 per month during the ten months ended September, 1943.

- 4. Summary of Manpower Statistics States: A complete check of Army records has disclosed necessity for appreciable revision in figures as to enlistments, discharges, etc., for some States. Pending completion of the check, figures hitherto published in this section are discontinued.
- 5. Defence Forces: The numbers of persons enlisted in the Defence Forces since the commencement of war are summarized from official records in the following statement. The gross enlistments are shown in the first column while the second column represents the net number taken into Defence Forces and not discharged. It includes deaths, missing, prisoners of war and wounded. This total is the significant figure for manpower purposes and has been used in the preceding tables. It shows the net extent to which the Defence Forces have drawn men and women from civil life. Actually it may be a little understated, as some of the persons included as discharges are probably incapacitated, and not fit to resume civil occupations.

	TOTAL FEMALES:	53,852	47,902	

(a) These figures allow for transfer from Militia to A.I.F. units.

(b) Approximate, subject to revision. As to Army figures, see footnote (b) to table on page 1.

The largest increase during September in the net figures for males occurred in the R.A.A.F. (2,200). The A.I.F. total increased by 4,300 but this increase was chiefly due to transfers from the Militia, as the total of the A.I.F. and Militia together declined by 2,000 compared with August. The Navy was increased by 500. Amongst females the most important change was an increase of 350 in the net number of W.A.A.A.F., while the A.W.A.S. increased by 300. The only other significant change during the month was an increase of 90 in the Naval Women's Services.

Net Enlistments by States: A complete check of Army records has disclosed necessity for appreciable revision in figures as to enlistments, discharges, etc., for some States. Pending completion of the check, figures hitherto published in this section are discontinued.
